***Response to Arguments***

Applicants' arguments are persuasive and the rejections based on **35 USC § 112** are withdrawn.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Brotz (US 6,161,382). Brotz shows (e.g. fig. 7) an actuator having at least one surface having a larger area than other surfaces thereof and consisting of a conjugated polymer material (middle layers between 144 and 146), whereby said material expands when an electrical voltage is applied between two locations thereof (between electrodes 144 and 146) and contracts when the electrical voltage is reduced, neither of the two locations being coextensive with the at least one surface having a larger area. Said conjugated polymeric material comprises polyaniline (col. 4, ll. 11-13). A method of actuation comprising the step of directly electrically stimulating a conjugated polymeric material at two locations (between electrodes 144 and 146) thereof. As noted said conjugated polymeric material comprises polyaniline.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2834

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 4 rejected under 35 U.S.C. 103(a) as being unpatentable over Brotz (US 6,161,382). Given the invention of Brotz as noted above, Brotz does not note doping of the polyaniline. The applicants' note in their remarks however that such is common in the art. As such, it would have been obvious to one having ordinary skill in the art to employ the commonly used doped polyaniline in any of their inventions.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. All additional references cited show electroded conjugated polymer materials in which the electrodes are not coextensive with the conjugated polymer materials.
